

IN THE CLAIMS

Claims 1 – 6 canceled.

7. A part containing a developer member of a two part imaging cartridge in which one part is in contact with the other part by at least one guide stud on one of said two parts entering at least one guide channel on the other of said two parts, one of said two parts containing a developer member and the other of said two parts containing a photoconductor, said guide channel being directed to bring said developer member in contact with said photoconductor and having an open end for said entry of said guide stud, said two parts having no force biasing member on either part for force biasing said photoconductor against said developer member, force biasing for imaging being dependent upon external force being applied to said two parts,

said part containing a developer member having said at least one guide stud

8. A part containing a photoconductor of a two part imaging cartridge in which one part is in contact with the other part by at least one guide stud on one of said two parts entering at least one guide channel on the other of said two parts, one of said two parts containing a developer member and the other of said two parts containing a photoconductor, said guide channel being directed to bring said developer member in contact with said photoconductor and having an open end for said entry of said guide stud, said two parts having no force biasing member on either part for force biasing said photoconductor against said developer member, force biasing for imaging being dependent upon external force being applied to said two parts,

said part containing a photoconductor having said at least one guide channel.
